

What's New At AboutSkin This Summer!

Kybella: Double-Chin Injection Treatment

- Don't just blame your genetics, TREAT IT !
- **Kybella** was recently FDA-Approved, and is now available to patients at a select few offices
- AboutSkin did the FDA trial on this product
- Dr. Cohen & Dr. Contreras are the only ones in Colorado who have injected this product to date in the FDA trial
- Treatments have started at AboutSkin--CALL NOW to schedule!

AboutSkin Dermatology is excited about the announcement of the U.S. Food and Drug Administration's approval of **Kybella**, a treatment for adults with moderate-to-severe submental fat, (which is the "double-chin" fat).

AboutSkin did the FDA trials on **Kybella**, and our very own Dr. Joel Cohen has

served on the Kythera Scientific Advisory Board over the past 3 years.

When **Kybella** is injected by a trained physician into the fatty tissue below the chin, it physically destroys the fat cell membrane in the "double-chin" area.

The safety and effectiveness of **Kybella** was established in clinical trials, and AboutSkin has participated in 2 of them. We are the **ONLY** office in the region experienced with this product from the FDA-clinical trial, so Dr. Cohen has been designated to train other physicians on this procedure.

Kybella is administered through a series of injections into the fat tissue in the submental area (double-chin). In the FDA trial, most patients did up to a handful (2-4 sessions is expected for most patients) of treatment sessions-- spaced about 4 weeks apart.

With **Kybella's** recent FDA approval being featured on many news sources, AboutSkin is excited to start offering it, so [call now to schedule!](#)

Radiesse: Now FDA approved for the hands

Radiesse is now FDA approved for the back of the hands! AboutSkin has been treating patients with **Radiesse** for years for volume loss of the back of the hands with amazing results and patient satisfaction--**before and after photos shown here are an actual AboutSkin patient treated in our office.** Hand volume rejuvenation has been something of an unmet need for a while now. Your hands can tell a lot about you, but one thing we don't want them to tell is your age. Also, consider laser treatment of brown spots on the hands too. [Call now to schedule fillers or lasers!](#)

Cellfina: Treatment of cellulite "dimples"

Only **14 aesthetic offices in the world** have this technology, and our very own Dr. Joel Cohen and Dr. Michael Contreras are a part of this select group of physicians since November of last year.

For the majority of patients, only a single treatment is needed to see **very long lasting results** and major cellulite dimples improvement. In the FDA study, patient satisfaction is an amazing 94% at one year, and 96% at two years after just one treatment. (Other cellulite treatments cannot compete with these long term results.) Note, this procedure is only for isolated dimple-type cellulite.

Events: Skin Cancer Awareness Hike

One in five Americans will develop skin cancer in their lifetime. Help us spread the word by telling skin cancer "to take a hike" !

Our very own Dr. Joel Cohen is the Chairperson for the American Academy of Dermatology Colorado hike this summer called "Tell Skin Cancer, TAKE A HIKE." Please join patients, families and friends along with the AboutSkin team for a community hike to raise funds for the AAD's SPOT Skin Cancer™ campaign.

Become part of the team, and you'll be joining our effort to help save lives. Please register in the next few weeks so we can best plan the bus transportation to/from Denver for the hike.
